

FIREFIGHTING TRAINING

NEW **A+** **Advancing Hand Lines, Part 1 of 2**

038-0205

In this two-part series, we take a look at the basics of advancing hoseline. Part one will show you how to determine the proper size for an attack line and the method of suppression. We'll also review different hose loads and discuss the advantages of each.

NFPA 1001 (2002)

A+ **Fire Origin and Cause Determination, The Fire Scene: Part 3 of 5**

038-0023

In the third of five FETN shows on fire origin and cause determination, we will continue to present the factors you must take into consideration when conducting a fire origin and cause investigation.

Protecting the fire scene, documentation, and points of origin determination are just a few of the topics we will cover in this episode.

Going for the Green: Secret to Grant Success, Part 2 of 2

038-2006

Knowing how to design and develop a potential grant proposal is essential to achieving success. Part two of this series continues to uncover the correct procedures of formatting grant proposals and applications, choosing writing styles, and learning to locate potential grant making organizations. You will amass the knowledge required to successfully design, write and submit grant proposals and applications.

(A supplemental workbook that applies to this series is included. It is not tested.)

HOMELAND SECURITY

NEW **A+** **Homeland One Awareness Level CIP: Applying Countermeasures, Part 2 of 2**

948-1017

Applying countermeasures is the fifth and final step in the Critical Infrastructure Protection Process. Learn how to identify which infrastructures you should protect and how to protect the most important critical infrastructure—yourself. Steps you take each day can make a difference in your own safety and the safety of your community. People who responded to the September 11th attacks at the World Trade Center and the Pentagon share what that tragedy taught them about the importance of applying countermeasures.

A+ **Homeland One Awareness Level Self-Protection Measures for WMD Incidents. Part 1 of 2**

948-1010

This program provides first responders with self-protection measures for WMD and hazardous materials events. The course includes the identification and use of all levels of HazMat gear and provides response procedures for WMD events or incidents.

EENET

More programs from EENET are coming, but at the time of this printing, the remainder of the February 2005 schedule had not been released. Visit www.FETN.com for updated EENET information.

AMERICAN HEAT

NEW **A+** **American Heat Holy Smoke! Fires in Places of Worship**

463-0205

Fires in places of worship are rare in most fire department's jurisdictions, but when they happen they can be one of the most challenging types of fires that we encounter. Knowing the reasons why fires in these buildings start, their usual locations, building construction features and key strategies/tactics for fighting these fires can mean the difference between controlling the situation or losing the building and perhaps firefighters. In this edition of American Heat, we visit Sycamore, Ill., and learn how that fire department handled a dangerous church fire after the building exploded and injured firefighters. Then we travel to Dallas, Texas, where that department responded to a catastrophic church fire caused by an electrical short.

A+ **American Heat Slaying the Dragon: Industrial Fires**

463-0204

Industrial firefighters and industrial emergency response team members face a unique situations when compared to their municipal firefighting colleagues. This program highlights one department's struggle to extinguish a tank fire near Monterey, Calif. We speak with Dwight Williams, one of the most successful industrial firefighters in the world, and we watch fire brigades in action at an industrial fire training school in Beaumont, Texas.

A+ **American Heat Essentials BLEVE**

500-0161

Get ready for a story that you'll never forget. Retired L.A. City Asst. Chief Frank

Borden hosts this premier installment of American Heat's "Fires That Changed the Fire Service." The story of the 1973 BLEVE tragedy in Kingman, Ariz., is a perfect example of incidents that continue to teach and save lives today.

PULSE

NEW **A+** **PULSE Lessons from Beyond: Cadaver Lab**

464-0205

The human body is a complicated network of arteries, muscles and other structures. PULSE goes inside the cadaver lab to give you a close-up look at how the body works. This is an anatomy and physiology lesson that goes far beyond pictures in a textbook because we examine different sections of the body to provide you with a better understanding of your patients.

A+ **PULSE The A and B: Airway and Breathing**

464-0204

This edition of PULSE focuses on airway and breathing, while PULSE Plus focuses specifically on capnography. New technology is helping emergency responders tend to patients with airway or respiratory conditions more effectively. We learn why some experts are convinced capnography is a breakthrough in EMS. We show you how to recognize and respond to patients with airway or pulmonary infections—including SARS, pneumonia and tuberculosis. We also hear from patients suffering from pulmonary diseases and find out what they want you to know about their conditions.
