

FIREFIGHTER TRAINING

 **Vehicle Operations & Scene Safety**

038-7002

  The scope of this program addresses a range of issues relating to emergency vehicle driver training, safe driving procedures, vehicle safety and safety at incident scenes on roadways. The video is intended to promote awareness of the issues and an appropriate attitude toward safety.

 **Advancing Hand Lines, Part 1 of 2**

038-0205

 In this two-part series, we take a look at the basics of advancing hoseline. Part one will show you how to determine the proper size for an attack line and the method of suppression. We'll also review different hose loads and discuss the advantages of each.
NFPA 1001 (2002)

 **NFPA 1901: Annex D, Part 2 of 2**

038-5002

 This program is the second and final part of our presentation on the recommendations of the NFPA committee included in NFPA 1901 Annex D. These recommendations will help you decide where your maintenance, replacement and new vehicle dollars should be spent and help you with your fire apparatus programs cost/benefit analysis.

 **Emergency Incident Rehabilitation, Part 2 of 2**

038-3012

 The United States loses more firefighters in the line of duty than any other country in the world. A leading cause of firefighter fatalities is stress. With the changes in our personal protective equipment, changes in types of response and our firefighters' drive to stay involved until the emergency is mitigated, the potential for casualties in the fire service is great. This course will prepare firefighters to reduce the number of firefighter casualties by explaining the signs and symptoms of firefighter stress and heat-related emergencies as well as how to aggressively treat responders. We also take a closer look at the recent advancements in firefighter rehabilitation.

EENET

More programs from EENET are coming, but at the time of this printing, the remainder of the February 2006 schedule had not been released. Visit FETN.com for updated EENET information.

AMERICAN HEAT

 **American Heat: GIS: Providing the Foundation for Real-Time Intelligence, Part 1**

 463-0206

 Imagine having the floor plan of a large bank at the fingertips of law enforcement officers before responding to a robbery; or the most direct route for firefighters to a wild-fire; or a graphical representation of the most likely terrorist targets within a given geographical radius. Sound like science fiction? Not anymore. GIS (Geographic Information System) technology provides first responders with real-time intelligence data in the form of maps, floor plans, photographs and much more. Join us as we "get under the hood" and explain the basics of how this new technology works. This program also profiles Wilson, N.C., a growing city that has implemented GIS technology to make quicker, more informed decisions about how to prepare and respond to disasters.

 **American Heat: "Holy Smoke!" – Fires in Places of Worship**

 463-0205

Fires in places of worship are rare in most fire department's jurisdictions, but when they happen, they can be one of the most challenging types of fires that we encounter. Knowing the reasons why fires in these buildings start, their usual locations, building construction features and key strategies/tactics for fighting these fires can mean the difference between controlling the situation and losing the building and perhaps firefighters. In this edition of American Heat, we visit Sycamore, Ill., and learn how that fire department handled a dangerous church fire after the building exploded and injured firefighters. Then we travel to Dallas, Texas, where that department responded to a catastrophic church fire caused by an electrical short.

PULSE: EMERGENCY MEDICAL UPDATE

 **PULSE: Care Across Cultures**

464-0206

  The face of our nation has changed dramatically. And in the next 50 years, all major minority groups are estimated to increase in population. To meet the demands of such a diverse culture, healthcare facilities need employees who can work well with patients and co-workers from different backgrounds. This course increases staff sensitivity to cultural differences and offers guidelines for working within a diverse environment.

 **PULSE: Lessons from Beyond: Cadaver Lab**

464-0205

 The human body is a complicated network of arteries, muscles and other structures. PULSE goes inside the cadaver lab to give you a close-up look at how the body works. This is an anatomy and physiology lesson that goes far beyond pictures in a textbook because we examine different sections of the body to provide you with a better understanding of your patients.
