

FIREFIGHTER TRAINING

NEW **FETN's Favorite Drills, Part 1 of 2**

038-0605

A+ During the years, FETN has worked with some of the country's top trainers; now you can experience the highlights in one series. Join us as we review some important drills from the past and present a few new ones as well. This two-part program is one that no training officer should miss!

NEW **Chief Officer Communications: The AMBER Alert System**

415-0605

A+ The AMBER Alert system is a nationwide system that is organized under state or regional plans to assist with the recovery of abducted or endangered children. The system was developed to quickly deliver information to the public about these children to aid law enforcement in the speedy recovery of the child. The role of the dispatcher is often critical in the quick deployment of personnel and, in some cases, in the actual entry of information into the system to initiate the AMBER Alert.

NEW **FETN Special
PULSE Utilization Guide**

702-0007

A+ The PULSE Utilization tutorial takes you through the newest features of the PULSE course. You'll find out how to get the most out of the instructor disc and the PULSE PowerPoint tool, and you'll learn how to use the new PULSE training icons. This is our newest generation of PULSE, and this tutorial will help you get the most from it.

A+ **Big Rig Rescue, Part 2 of 3: Big Rig Extrication**

732-0119

A+ If you're in the fire service anywhere in the country, at some point you will likely work a big rig rescue. In the second program of our three-part series, we cover the nuts and bolts of extrication. Although there are some similarities to standard vehicle rescue, there are some major differences too.

HOMELAND SECURITY

A+ **Homeland One Preparedness Level
Site Security Procedures for WMD Incidents**

948-1108

A+ This program helps the first responder understand his or her agency's site security procedures for WMD events. This includes incident scene security and keeping unauthorized personnel away from adjacent hazardous areas.

Protecting America: Are our Schools Safe?

911-0022

A+ *Protecting America* investigates what is being done to keep students safe across the country. We'll look at the potential dangers to schools after September 11th and how first responders can keep students from becoming the next victims of a terrorist attack.

EENET

More programs from EENET are coming, but at the time of this printing, the remainder of the June 2005 schedule had not been released. Visit FETN.com for updated EENET information.

AMERICAN HEAT

NEW **American Heat: "Water, Water Everywhere"—
Flood and Swiftwater Response**

463-0605

A+ Floods can occur in any area at any time. Emergency response personnel must be prepared for the storm before it arrives and be prepared to deal with the damage it leaves behind. They must develop and utilize both community-based and systems-based approaches to ensure their response will be safe, effective, and successful. This month's *American Heat* focuses on Charlotte, NC, and explains how that fire department changed its thinking about flood and swiftwater response to save property and lives. NFPA 1006 (2003)

A+ **American Heat: Surviving the Fourth: Firework Safety**

463-0604

A+ Celebrating our country's independence can be a fun and exciting time, but the involvement of fireworks can create a dangerous situation. This program explores the specific

risks that fireworks pose to both the public and to fire personnel. We look at how you, the firefighter, can successfully navigate a fireworks explosion.

NFPA Standards: 1123 (2000); 1124 (2003)

A+ **American Heat Essentials: Tropical Storm Allison**

500-0184

A+ The word "hurricane" inspires fear, but the words "tropical storm" often inspire very little reaction at all. It's no wonder that people making their first acquaintance with Tropical Storm Allison were caught by surprise. In fact, at one point, Allison was downgraded to a "tropical depression." This weather anomaly came back with a vengeance and wreaked destruction and tragedy. This installment of *American Heat* captures the story of the storm that would not die and the responders who would not give up.

PULSE

NEW **PULSE: Gynecology for EMS**

464-0605

A+ The reproductive system of women presents a number of potentially life-threatening or life-altering emergencies. This program uses computer animation to display the physiology of the female reproductive system and illustrates the parameters for normal ovulation and menstruation. Life-threatening disorders often can be mimicked or masked by other less severe ailments. This program explains the pathophysiology of the major causes of non-traumatic abdominal pain in women. It also shares insights into the proper assessment and management of those disorders. You will also see how your assessment of a sexual assault victim can help healing or cause additional psychological injury.

A+ **PULSE: Outdoor Danger: Environmental Emergencies**

464-0604

A+ Summer fun brings unique dangers. We show you how to respond to victims of drowning and near-drowning, and describe the signs and symptoms to look for with heat exhaustion. A segment on diving emergencies includes a look at the Diver's Alert Network and other resources to help you respond. *PULSE Plus* takes you high in the sky to find out how to treat patients suffering from altitude sickness.
