

FIREFIGHTER TRAINING

NEW **Class A Foam and Compressed Air Foam**

A+ 038-1106

A+ Learning how and why certain equipment and products work is very important. Without the proper training, you never truly learn how to use equipment and products to their full potential nor do you learn what actions may make things worse or less effective. Gaining information allows you to make informative decisions on whether you think the benefits are worth the cost for your department. This holds true for Class A foam and CAFS. The information in this lesson plan will provide the pros and cons of each of these products and allow you to use them more effectively.

NEW **Prescription for Performance, Part 1**

A+ 700-2003

A+ In order to perform firefighting duties safely and effectively, firefighters must maintain peak physical conditioning. This program covers the basics of a physical conditioning program that will keep firefighters in top shape.

A+ **FETN's Favorite Drills, Part 1 of 2**

A+ 038-0605

A+ During the years, FETN has worked with some of the country's top trainers; now you can experience the highlights in one series. Join us as we review some important drills from the past and present a few new ones as well. This two-part program is one that no training officer should miss!

A+ **Managing the Fireground, Part 2 of 2: ICS for RIT**

A+ 038-3028

A+ In Part 2, our RIT has played an active role in improving egress, mitigating hazards and surveying the building. When the RIT is activated is when weak incident command systems fall apart. We'll show you how to utilize the ICS to maintain control and accountability during the transition from fire attack to rescue. We'll also look at how to communicate with the RI and support teams for an effective rescue operation.

A+ **Dignity Despite Disaster, Part 4 of 4:
Managing a Line of Duty Death**

A+ 038-0018

Death is a taboo subject to talk about in American culture. In the fourth and final edition of this series, we will discuss openly the logistical issues and needs for a line-of-duty death funeral. Dan McGuire, the CEO of CISM Perspectives, will outline funeral diagrams and discuss additional support for the family, department and the community, as well as how to do all of this with tradition, honor and respect.

PREPNET

More programs from PREPnet are coming, but at the time of this printing, the remainder of the June 2006 schedule had not been released. Visit FETN.com for updated PREPnet information.

AMERICAN HEAT

NEW **American Heat: The Cove Street Fire & Rescue**

A+ 463-0606

A+ These days, the American firefighter is often pushed to retain knowledge beyond the historical definitions of firefighting. EMS, HAZMAT and homeland security issues are just a few examples. As firefighters progress with their certifications and education, sometimes the most vital, basic self-preserving knowledge and practices get misplaced. This program will serve to motivate new and experienced firefighters and remind them of the responsibility for their own safety and that of the "team."

A+ **American Heat: "Water, Water Everywhere" —
Flood and Swiftwater Response**

A+ 463-0605

A+ Floods can occur in any area at any time. Emergency response personnel must be prepared for the storm before it arrives and be prepared to deal with the damage it leaves behind. They must develop and utilize both community-based and systems-based approaches to ensure their response will be safe, effective and successful. This month's American Heat focuses on Charlotte, NC, and explains how that fire depart-

ment changed its thinking about flood and swiftwater response to save property and lives.

PULSE: EMERGENCY MEDICAL UPDATE

NEW **PULSE: Getting the Most Out of Patient Assessment**

A+ 464-0606

A+ The modern EMS provider responds to many challenging incidents that require critical thinking skills. The ability to conduct a comprehensive patient assessment is a key part of applying those thinking skills. It is vitally important that the caregiver conduct a thorough patient assessment on each and every call. This will help ensure the patient receives a high quality and seamless level of care from the pre-hospital environment all the way to definitive in-hospital care. This lesson will focus on the many different aspects of patient assessment, including scene safety, initial impressions, primary survey, secondary survey, and the focused/detailed physical exams, depending on the type of incident. It has been said that "knowledge is power." This is certainly true in the realm of pre-hospital care: the more knowledge caregivers have about a patient, the more power they have to deliver exemplary care. The EMS provider can only glean this knowledge through an accurate and thorough patient assessment.

A+ **PULSE: Gynecology for EMS**

A+ 464-0605

A+ The reproductive system of women presents a number of potentially life-threatening or life-altering emergencies. This program uses computer animation to display the physiology of the female reproductive system giving the parameters for normal ovulation and menstruation. Life-threatening disorders often can be mimicked or masked by other less severe ailments. Using computer graphics, this program explains the pathophysiology of the major causes of non-traumatic abdominal pain in women and provides direction for the proper assessment and management of those disorders. You will also see how your assessment of a sexual assault victim can help healing or cause additional psychological injury.
