

### FIREFIGHTER TRAINING

**NEW** **FETN's Favorite Drills, Part 2 of 2**

**A+** 038-0705

In the second part of our series, we pick up where we left off with some of the top drills FETN has covered. We will also look at a few new ones, ranging from simple drills that can be put into use the same day to the complex drills that take weeks of preparation. No training officer should miss this program.

**NEW** **Communications: Answering Suicidal Callers**

**A+** 415-0705

Many 9-1-1 telecommunicators in the United States may not have training or experience handling suicidal callers. They may develop their techniques while on the job through trial-and-error, but not have the benefit of formal training. This training course will enable you to benefit from others' experiences in handling a suicidal caller. This course dispels common suicide myths, teaches you how to assess the risk of a possible suicide call, and demonstrates proper techniques for handling that call.

**A+** **Big Rig Rescue, Part 3 of 3:  
Anatomy of a Big Rig Trailer**

**A+** 732-0120

Did you know the trailer on a big rig is almost a separate vehicle of its own? That's important to remember if you're called to a big rig rescue in your community. In our final program in this series, we cover what few other trainers do. We walk you through some of the key information you need to know about a trailer, including controlling the brake system and shutting off the trailer's separate engine.

### HOMELAND SECURITY

**A+** **Homeland One Preparedness Level—Scene Control Procedures for WMD Incidents**

**A+** 948-1109

This course explains the process of protecting physical evidence at the scene of a WMD event, and includes isolation of the danger area and recognizing that an incident may be a crime scene, which needs to be preserved for investigators.

**A+** **Protecting America: Overwhelmed**

**A+** 911-0005

Resource management in extreme disasters is challenging enough, but when terrorism is the cause the challenges multiply. As the 2001 anthrax event clearly demonstrates, public panic can push finite resources to the brink of exhaustion.

### EENET

More programs from EENET are coming, but at the time of this printing, the remainder of the July 2005 schedule had not been released. Visit FETN.com for updated EENET information.

### AMERICAN HEAT

**NEW** **American Heat: Firefighter Safety on the Roadway**

**A+** 463-0705

The number of emergency responders killed or injured at roadway scenes continues to increase each year as the highways become more congested with vehicles. This program provides recommendations for reducing on-scene risk and offers tips for staying out of harm's way when responding to a roadway incident.

**A+** **American Heat: Out of the Blue**

**A+** 463-0704

This module shows firefighters how to approach and mitigate random air disasters involving aircraft that crash into residential neighborhoods, onto roadways and other unexpected places. Coverage includes hazardous material threats resulting from fuel spills, difficulties associated

with the location of the disaster, and steps to safeguard rescue personnel and the public.

**A+** **American Heat Essentials: Fire in the Firehouse**

**A+** 500-0142

This American Heat program looks at a near-fatal fire in a fire station in Burke, Va., and a fire that destroyed a station and all its apparatus and equipment in Silverlake, Wis. The Phoenix, Ariz., fire department presents proactive efforts for fire and line safety in fire stations.

### PULSE: EMERGENCY MEDICAL UPDATE

**NEW** **PULSE: A Recurring Epidemic: Infectious Disease**

**A+** 464-0705

First responders are often exposed to infectious diseases without warning. Do you know how to protect yourself from the invisible attack of airborne, bloodborne, waterborne, or foodborne pathogens? This course highlights the detection, assessment, and management of a disease outbreak and examines common infectious diseases you could face on any given call.

**A+** **PULSE: Disaster Medicine**

**A+** 464-0704

Do you know how to handle a disaster situation? Hurricanes, earthquakes and tornadoes are just a few examples of the many calamitous incidents that could happen any day. Many of the lessons we learn from these disasters can be applied in everyday situations, including a terrorist attack. This episode of *PULSE* discusses the challenges of disaster medicine and *PULSE Plus* deals specifically with disaster-resistant communities.
