

### FIREFIGHTER TRAINING

 **Special Teams: Introduction to Ice Rescue**

038-0306

 Ice rescue incidents pose special hazards to the responding personnel. If fire personnel are not aware of the potential hazards, they could easily become victims themselves. Understanding the limits and capabilities of responding personnel can result in a successful ice rescue and ensure that the rescuers are not harmed. Part 1 of a two-part series, this course discusses incident planning, tactical operations and safety concerns for rescue personnel at an ice-involved incident. Types of ice formations and the characteristics and potential hazards of ice are described. In addition, this course provides an overview of the signs and symptoms of hypothermia and its treatment.

 **Ladder Company Rescue Operations, Part 2 of 3**

038-0805

 FETN visited the busiest ladder company in the United States and learned a few tricks of the trade. This course looks at proper assignments and equipment for a ladder company and discusses tactics used at single family, multiple-occupancy dwellings. It also covers tactics used at high-rise and commercial buildings.

 **Forcible Entry, Part 2: Hand Tools**

038-3002

 Part 2 of our forcible entry series covers basic forcible entry. You will learn and review the basic operations required for the majority of access problems in the field. Watch as Kentucky firefighters “tear it up with class” for your benefit.

 **Media Savvy, Part 2**

038-0087

 In Part 2 of Media Savvy, learn tips and strategies for speaking to reporters in crisis mode. Learn how to handle the media in a big incident, plus get insight on how to attract the media when you want to publicize an event, such as a great community service program or a fund-raiser.

### PREPNET

More programs from PREPnet are coming, but at the time of this printing, the remainder of the August 2006 schedule had not been released. Visit FETN.com for updated PREPnet information.

### AMERICAN HEAT

 **American Heat: Stripping Away the Mystery: Effective Management of Strip Mall Fires**

463-0806

 Strip malls are a pervasive element in the American landscape; they are in every state, on every road, in every city. And they contain every kind of occupant. For these reasons, strip mall fires should be approached with specific strategic and tactical considerations. This course identifies the common construction traits of strip malls and identifies challenges caused by the huge variety of strip mall occupants. It also reviews the automatic detection and suppression systems and the proper management of heat and smoke.

 **American Heat: Rural Water Supply Tanker Ops**

463-0805

 This edition of American Heat discusses the importance of rural water supplies; specifically, water supply sources, methods of delivery, and how to improve access and use of those sources. Learn from several volunteer firefighters in Micro, N.C., as they practice relay pumping, pumping from a pond, and tanker shuttle operations. Also, firefighters at the Clark County (NV) Fire Department recap what happened when a large grassfire threatened several homes and they had no access to fire hydrants.

### PULSE: EMERGENCY MEDICAL UPDATE

 **PULSE: Pediatric ARDS**

464-0806

 Responding to a call involving a pediatric case of Acute Respiratory Distress Syndrome (ARDS) or Acute Lung Injury (ALI) can be challenging for the EMT professional. In order to provide the best emergency care possible, it is important for first responders to understand the epidemiology and pathophysiology of pediatric ARDS as well as the clinical presentation and initial management of the condition in children.

 **PULSE: The Ins and Outs of Technical Rescue**

464-0805

 Emergency personnel occasionally face rescue situations requiring specific skills that exceed their training. This course explains some of the dangers involved in high-angle, confined-space, and swiftwater rescue situations and discusses the role of nontechnician EMS personnel during these rescues. You will see simulations and actual rescues and learn how quickly even a situation that appears simple can turn deadly for the untrained rescue team.
