

FIREFIGHTER TRAINING

HazMat Awareness, Part 2 of 8

737-0202

 This HazMat Awareness course is based on curriculum from  IFSTA and the University of Kansas's Fire Service Training division. It complies with all required dimensions of the OSHA and EPA. In part two of our series, we discuss the different types of hazardous materials and the ways humans can be exposed to harmful substances. We examine possible ignition sources and share clues that first responders should look for during any routine call. We also continue to review the placards that you might encounter on a daily basis.

Aircraft Rescue, Part 3 of 3: Emergency Communications

732-0082

This program covers updates to the ARFF emergency communications regulations, including discrete radio frequencies and hand signals. Join us as instructors cover vital communications systems for aircraft rescue. CFR 139.319(j) section 4

HOMELAND SECURITY

Protecting America: Decon or Disaster, Part 2 of 2

911-0024

Protecting America returns to Chicago Heights, Ill., for the second and final part of the Decon or Disaster series. Several neighboring fire departments, police departments, and hospitals band together during a weapons of mass destruction drill to determine how to minimize contamination, injury and danger after a sarin gas leak. We'll use this exercise as a training ground for the fire/EMS, law enforcement and healthcare disciplines.

Homeland One Awareness Level CIP: Analyzing the Vulnerabilities

948-1014

Each jurisdiction needs to look seriously at protecting their critical infrastructure. This program will help the viewer understand the third step of Critical Infrastructure Protection process—analyzing vulnerabilities—as outlined by the U.S. Fire Administration. Based on ODP guidelines.

EENET

More programs from EENET are coming, but at the time of this printing, the remainder of the October 2005 schedule had not been released. Visit FETN.com for updated EENET information.

AMERICAN HEAT

Calling the Mayday

463-1005

 Why is getting a firefighter to call a Mayday such a problem? This course explores the factors behind this issue: the definition of a Mayday situation, reasons firefighters may delay or fail to make the call, and Mayday decision-making parameters and calling procedure. FETN also visits TrainingDivision.com in Texas and the 2005 Firehouse Expo in Baltimore, Md., where students drill Mayday through a series of obstacles and live fire drills. NFPA 1521 (2002)

Save the Mansion!

463-1004

 Large, mansion-style homes can be beautiful to look at and fun to explore, but when engulfed in flames, these large single-family dwellings can create added obstacles for a firefighting team. Not only that, but these huge structures often are built in newly developed areas without proper water supply. This program focuses on why these super-size homes may require a different methodology than the typical house fire and teaches you how to apply the proper response in your area.

Winter Firefighting Operations

500-0173

 Wind and rain. Snow and sleet. Ice and fog. Fire does not care about the weather forecast. You will likely spend some time on a cold, frozen fireground with a wind chill cutting right through your bunker gear. How do you prepare for winter firefighting operations? We went to the locations where these kinds of conditions are endured and even taken for granted. Join American Heat as we travel to Toronto and Clarington, Ontario, and to International Falls, Minn. Learn why it's not a good idea to wash your fire truck in the middle of January, see how a coating of ice can actually keep you warm, and learn how the International Falls Fire Department uses its pumper engines as snowplows.

PULSE: EMERGENCY MEDICAL UPDATE

Everyday Pediatrics

464-1005

 This edition of *PULSE* focuses on providing the latest information on pediatrics. The latest medical literature is reviewed and authors are interviewed to discuss their findings. This program highlights common pediatric emergencies as well as their management procedures.

Legal Issues in EMS

464-1004

 Many of our prehospital care practitioners have received little in terms of legal preparation or for testifying in court. This program discusses basic tenets of U.S. law, legal pitfalls and an anatomical overview of a lawsuit. *PULSE Plus* concludes with the PCR in court, reviewing charting guidelines, and what you need to know when you are on the stand and required to provide testimony.
