

FIREFIGHTER TRAINING

Responding to Garden Apartment Fires

038-0206

The term “garden apartment” encompasses a wide range of buildings that are generally classified as combustible, multiple-dwelling occupancies, which include garden apartments, row houses, town houses and other similar structures. Many motels and small office buildings that share the same construction characteristics should be grouped within this definition as well, and similar suppression strategies should be employed. When they are ablaze, these structures present firefighters and fire officers with a complex, strategic and tactical situation with numerous safety concerns both for the responding agency and the buildings’ occupants. This course examines the many issues surrounding responses to garden apartments, detached apartments and condominium-style building fires.

Managing the Fireground: SCBA Failure

038-3023

You’re in pretty deep and have about 15 minutes of air in your bottle. Suddenly, your next breath pulls your mask tightly to your face and you figure it out: SCBA failure! Have you rehearsed this potential emergency so that you know what to do? We’ll give you the latest practical information that will save your life. Be there! This is a course that no firefighter should miss.

Vehicle Driving Operations, Part 1 of 3

038-3031

The ability to remain calm and focused while maneuvering through traffic is of utmost importance to both the fire apparatus crew and the general public. You are responsible to bring your crew to the fireground quickly and safely. In the first course of our three-part series, we join the National Safety Council for a discussion of the “cushion of safety.”

NFPA 1451 (2002) 4.2.1.1 and 4.2.3

AMBER Alerts

415-0605

The AMBER Alert system is a nationwide system that is organized under state or regional plans for the purpose of assisting in the recovery of abducted or endangered children. The system was developed to quickly get information out to the public about these children in order to aid law enforcement in the speedy recovery of the child. The role of the dispatcher is often critical in the quick deployment of personnel and, in some cases, in the actual entering of information into the system to initiate the AMBER Alert.

PREPNET

More programs from PREPnet are coming, but at the time of this printing, the remainder of the October 2006 schedule had not been released. Visit FETN.com for updated PREPnet information.

AMERICAN HEAT

American Heat: Emergency Procedures for Gasoline-Electric Hybrid Vehicles

463-1006

Gasoline-electric hybrid vehicles present a unique set of challenges for first responders. This course identifies those challenges and dispels common myths about the dangers of these vehicles to rescuers in a crash or fire situation. Operation, design and components of a typical gasoline-hybrid vehicle will be identified along with the proper fire and emergency rescue procedures.

American Heat: Warehouses: Taming the Horizontal High-rise

463-0104

How would you respond to a fire call at a warehouse in your district? Do you know what kind of fire load the buildings have? Do you know where the fire pump room is located? Rescue Fire Company in Cambridge, Md., share the story of a 10-alarm warehouse fire in their district that brought 42 mutual aid companies, 400 firefighters, and a successful operation to their city in April 2003. Also, the San Antonio,

Texas, Fire Department demonstrates the importance of live training in warehouses and the Coppell, Texas, Fire Department hosts a warehouse walkthrough to point out the key areas you should be aware of.

PULSE: EMERGENCY MEDICAL UPDATE

PULSE: Extremity Injuries

464-1006

Regardless of cause or mechanism of injury, with a few exceptions, extremity injuries are treated similarly. Scene size-up, patient evaluation, treatment decision, immobilization and pain control are all part of the basic and advanced EMS practicum. There are decisions to be made, however, in situations where “life over limb” cases present. Also, in patients with compartmental syndrome, severe crush injuries, amputations, neurovascular compromises and other presentations, decisions as to treatment and hospital transport (i.e., ground vs. air) all play a significant role in patient outcome.

PULSE: Poison Exposure Hazards

464-0104

In the air or on the ground, at work or at home, everywhere we turn there are possible poison exposure hazards. This PULSE training activity examines the differences between toxic and non-toxic substances, shows the benefits of utilizing our poison control centers and looks at different options for handling an exposure. PULSE Plus focuses specifically on alcohol poisonings.

PULSE: Everyday Pediatrics

464-1005

This edition of PULSE focuses on providing the latest information on pediatrics. The latest medical literature is reviewed and authors are interviewed to discuss their findings. This course highlights common pediatric emergencies as well as their management procedures.
