

FIREFIGHTER TRAINING

Leadership Lessons From the Marine Corps

038-0506

  The Marine Corps is an organized, trained and equipped team of people who operate, overcome and win in chaotic and dangerous conditions. Deep in the heart of each Marine is the confidence to overcome any adversary and the desire to be in the first wave ashore. Likewise, the fire service is composed of people who willingly respond to crisis and danger in their communities to help citizens in need and eliminate the dangerous conditions that threaten. This course is based upon more than 10 years of hands-on seminars titled "Where the Battle Begins" that have asked firefighters of all ages and ranks to apply Marine Corps leadership principles and approaches to their everyday challenges in their fire departments. While the Marine Corps and fire service use very different weapons and are chartered differently, most participants in the seminars found significant congruence in the nature of the people in the two organizations and, by extension, in the leadership principles they apply.

Suicidal Callers

415-0705

 Many 9-1-1 telecommunicators in the United States may not have training or experience handling suicidal callers. They may develop their techniques while on the job through trial and error but not have the benefit of formal training. This course will enable you to benefit from others' experiences in handling a suicidal caller. This course dispels common suicide myths, teaches you how to assess the risk of a possible suicide call and demonstrates proper techniques for handling that call.

Vehicle Driving Operations, Part 2 of 3

038-3032

 In the second program in our series, we join the National Safety Council and look at driving with lights and siren, special traffic situations and other special circumstances for which you need to be aware.

Managing the Fireground: Offensive/Defensive, Part 1

038-3021

 Getting trapped in an offensive position on a defensive fire is one of the most common causes of fireground deaths and injuries. Being able to recognize the conditions that call for an offensive, interior fire attack and those that call for a defensive, exterior fire attack is essential for success and survival. All personnel, both the leaders and the followers, must understand their roles when this Change of Strategy Order is given.

PREPNET

More programs from PREPnet are coming, but at the time of this printing, the remainder of the November 2006 schedule had not been released. Visit FETN.com for updated PREPnet information.

AMERICAN HEAT

American Heat: The Art of Smoke Reading

463-1106

  Regardless of the size of your fire department, each and every firefighter should be concerned with the art of smoke reading. Smoke reading will better prepare the firefighter to detect unsafe smoke/fire conditions in buildings and will provide critical information in the fire suppression decision-making process. This is just one of the many tools that should be contained in the "tool box" for firefighters. This course will define smoke, its toxic hazards, chemical makeup and behavior. We will review the various smoke control/management systems affecting smoke reading and list the fundamental safety precautions in reading smoke conditions.

American Heat: The 16 Initiatives From the National Fallen Firefighters Foundation

463-1105

 This course discusses the 16 firefighter life safety initiatives that were developed at the Firefighter Life Safety Summit hosted by the National Fallen Firefighters Foundation and the U. S. Fire Administration on April 14, 2004. It will explain these initiatives, including implementation practices and recommendations with the anticipated outcome of the reduction of firefighter deaths and injuries.

American Heat: Against the Wind: Mother Nature's Fury

463-0504

 Does your fire department have an emergency operations plan in place, ready for any natural disaster your community may encounter? Meteorologist Al Moller from the National Weather Service will teach you about some basic types of storms so you can prepare. We also profile the Virginia Beach (VA) Fire Department and the Manlius (NY) Fire Department to find out how their pre-plans paid off.

PULSE: EMERGENCY MEDICAL UPDATE

PULSE: Bloodborne Pathogens

464-1106

  Frequent contact with dangerous bloodborne pathogens is a regular part of an EMT's job. Do you know what the most common—and deadly—bloodborne pathogens are? Do you know how to protect yourself against occupational exposure? And do you know what to do if you are accidentally exposed to a bloodborne pathogen? Join us for the answers to these questions and more in this course, which discusses the different types of bloodborne pathogens and how they are acquired. Personal protective equipment and responding to occupational exposure are also discussed.

PULSE: EMS Support of Special Operations

464-1105

 This course is dedicated to special operations support considerations for EMS providers. Highlights include: tactical EMS, extended operations, scene safety and rehab tricks.
